

loading (3mm) and is equipped with a safety lock to prevent accidental damage to the probe or wafer while providing intuitive control and accurate contact positioning for the most accurate measurement. This function is important in high frequency and high power testing.

> Loadable laser

Multiband laser cutting system can be applied to a load in the vast majority of microscope on the analysis of the failure, can realize precise cutting and selective onlookers level material removal precision and reliable advanced laser transmission system (ABDS) can choose different band to deal with different material cutting and cutting work laser output energy of 2.7 mJ, largest energy adjustable series 300 water cycle cooling structure make the system more compact and dispensing with maintenance.

9) E Series 150mm Economical Manual Probe Station

Product Overview

E series prober has excellent mechanical system, stable structure and performance, ergonomic design, more convenient operation, support multi-function upgrade, more abundant product functions. The product is mainly used in the manufacturing and research fields of integrated circuit, LED, LCD, solar cell and other industries.

Basic Information
